ZAAKIY INSTITUTIONAL SYSTEM

TradingView Indicator & Strategy Cockpit — Trader's Operating Manual

Comprehensive Telemetry Breakdown, Decision Matrix, and Execution Playbook

1. Executive Summary & 7-Pillar Quantitative Engine

The **Zaakiy System** is an institutional-grade, multi-factor trend and momentum framework designed to eliminate retail whipsaws, distinguish healthy pullbacks from macro trend reversals, and execute asymmetric risk-reward trades. Unlike simplistic moving average crossover scripts, Zaakiy verifies 7 independent quantitative pillars before confirming any action:

Pillar	Mechanism	Institutional Purpose
1. Trend Ribbon	21 / 50 EMA Ribbon + Optional 200 EMA	Establishes primary trend regime and dynamic support/resistance cloud.
2. Supertrend Envelope	ATR Volatility Bands (Factor 3.0, Len 10)	Volatility-adjusted trailing boundaries preventing early exits.
3. MACD Momentum	Fast 12, Slow 26, Signal 9 Histogram	Measures impulse acceleration vs deceleration / exhaustion.
4. Relative Strength (RSI)	14-period RSI with regime thresholds	Identifies momentum expansion (>50) and momentum divergences.
5. Volume & Flow (RVOL/CMF)	Relative Volume (RVOL) + Chaikin Money Flow	Confirms true capital accumulation vs distribution / spoof wicks.
6. Valuation Zones	Dynamic Discount Buy & Premium Sell Areas	Frames structural range: buy near wholesale floor, sell near ceiling.
7. Price Action Bar	Initiative close direction + zone containment	Ensures trigger bar demonstrates initiative buyer/seller control.

2. The HUD Telemetry Cockpit (Understanding Every Statistic)

The HUD table on your chart updates on every tick, aggregating multi-timeframe analytics into an ultra-clean, high-contrast terminal interface. Every row has a specific tactical purpose:

Row / Statistic	Normal Values	What It Means & How to Trade It
Action	EARLY BUY **BUY (Confirmed)** TAKE PROFIT DIP WATCH STAND DOWN	**Automated Operational Directive:** Synthesizes all 7 pillars and valuation into an immediate, rule-based execution signal on every tick.
Regime	**BULLISH** / **BEARISH**	High-level directional bias. Never enter counter-regime trades without macro structural confirmation.
Confluence	**0 / 7 to 7 / 7** (Target: >= 5 / 7)	**Primary Gatekeeper:** 5/7 to 7/7 confirms institutional sponsorship. 1/7 to 3/7 warns of failure/chop.
Trend Health	**STRONG (Acc)** **WEAKENING** CONSOLIDATING	Quantifies trend conviction via ADX + Divergences. **WEAKENING** flags RSI divergence or ADX exhaustion—the signal to trim position size.

Structure	**TRENDING** **DIP PULLBACK** **MACRO REVERSAL**	Classifies price vs Ribbon: **DIP PULLBACK** is a low-volume hold of 50 EMA (optimal buy); **MACRO REVERSAL** is structural failure (exit immediately).
Valuation Area	**DISCOUNT (Buy)** **PREMIUM (Sell)** FAIR VALUE	Identifies wholesale vs retail distribution zones. Buy in Discount, scale out / take profit in Premium.
Ribbon 21/50	Bullish (21>50) / Bearish (21<50)	Fast and slow trend alignment. When stacked, confirms trend momentum is expanding.
Supertrend	Bull Break / Bear Break	Dynamic ATR volatility boundary. Acting as your trailing stop barrier.
MACD Mom	Exp Bull / Exp Bear / Flat	Cycle acceleration. 'Flat' indicates deceleration—watch for potential pullbacks.
RSI (14)	Value (e.g. 71.9 Bull, 31.2 Bear)	>50 = Bull dominance. >75 = Overextended (prepare TP). <25 = Capitulation (prepare short cover).
Vol & CMF	RVOL x | CMF Score (e.g. 1.4x | +0.28)	**RVOL >= 1.0x** validates institutional participation. **CMF > +0.05** proves net capital inflow; negative CMF warns of smart money selling.
Open Interest (Perps)	OI Delta % (e.g. +3.4%)	Rising OI with rising price = Genuine new capital accumulation. Falling OI = Short squeeze / liquidation.

3. Precision Execution Rules (The 5 Core Trading Decisions)

Use this operational decision matrix to execute trades objectively without emotional second-guessing:

A. Opening a Position (Long / Short Entry Gatekeepers)

• **1. Confluence Requirement:** Must be **>= 5 / 7** (ideally 6/7 or 7/7). Never enter on 1/7 to 3/7.

• **2. Trend Health:** Must be **STRONG (Acc)** or **STEADY**. Stand down if CONSOLIDATING (ADX < 20).

• **3. Entry Style 1 — Breakout:** Enter on confirmed BUY/SELL signal when Structure == TRENDING and RVOL >= 1.0x.

• **4. Entry Style 2 — Pullback (Best R:R):** In a Bull trend, wait for Structure == DIP PULLBACK into the 21/50 EMA on low volume (RVOL < 1.0x). Enter when the first green candle closes above 21 EMA with positive MACD.

B. Reducing Position Size (De-Risking / Front-running Exhaustion)

• **1. Signal: Trend Health switches to WEAKENING:** Occurs when RSI bearish divergence forms or ADX rolls over above 35. **Action: Trim 30% to 50% of position.**

• **2. Extreme RSI:** When RSI pushes above **75-80** on longs or drops below **20-25** on shorts, scale out 30%.

• **3. CMF Flow Divergence:** If price makes a new high but CMF turns negative (e.g. CMF = -0.12), smart money is offloading into retail FOMO. Reduce risk immediately.

C. Setting Take Profit (TP Targets)

• **1. Institutional Valuation Zones:** The shaded **Premium Sell Area** (distribution ceiling) is the primary target for Longs. The **Discount Buy Area** is the target for Shorts.

• **2. Fixed R:R Targets:** The automated engine projects **+2.5R** (configurable 1.5R to 5.0R) based on initial risk.

• **3. Scaling Rule:** Scale 50% at +1.5R, scale 30% at Valuation Area ceiling, and let the remaining 20% runner trail behind the 21 EMA Ribbon.

D. Stop Loss (SL) & Moving to Breakeven

• **1. Hard Initial Stop Loss:** Placed dynamically at **1.8x ATR** from entry, anchored just outside the **50 EMA Ribbon** and swing pivot.

• **2. Breakeven Lock (+2 ticks):** Once price achieves **+1.0R** in profit, the system automatically pulls the stop loss to Breakeven + 2 ticks, making the trade entirely risk-free.

• **3. Trailing Mechanism:** As long as Trend Health == STRONG, trail stop below the Supertrend line or candle close below the 21 EMA.

E. Closing a Position (100% Invalidation)

• **1. Structure Flips to MACRO REVERSAL:** Price closes below 50 EMA with high volume (RVOL >= 1.2x) and negative money flow (CMF < -0.05). Close 100% immediately.

• **2. Confluence Collapse:** If confluence drops below **3 / 7** (as seen in the APTUSDT case study), the edge is gone.

• **3. Opposite Signal:** Confirmed flip to opposite Regime (e.g., Long position receives confirmed SELL signal).

4. Real-World Chart Case Studies

Asset	HUD Telemetry State	Correct Institutional Action
ZKUSDT (4H Chart)	Regime: BULLISH | Confluence: 4/7 (Rising) Health: STRONG (Acc) | Vol: 1.4x (High) Structure: TRENDING | RSI: 61.6	**Prime Trend Expansion:** Ride long with stop below 21 EMA. CMF is -0.12, so plan to trim 40% when price touches the red Premium Sell Ceiling.
APTUSDT (4H Chart)	**Regime: BULL (Lagging) | Confluence: 1 / 7** Health: CONSOLIDATING | Ribbon: Bearish Supertrend: Bear Break | RSI: 38.9 Bear	**The Danger Trap:** DO NOT BUY. Confluence collapsed to 1/7 and all 5 indicators below are bright red. If holding a long, exit 100%.
BTCUSD & OTHERS (4H Chart)	Regime: BEARISH | Confluence: 5/7 to 6/7 Supertrend: Bear Break | MACD: Exp Bear RSI: 31-37 Bear | Vol: 0.9x	**High-Conviction Short:** High confluence short bias. Place stop above 50 EMA. Target is the green Discount Buy Area.

5. Customization & Settings Quick Reference

In TradingView, click the gear icon (■) on the Zaakiy indicator to adjust parameters to your trading style:

Setting Group	Parameter	Recommended Default	Tactical Guidance
Valuation Zones	Show Institutional Areas Valuation Lookback Zone Depth (%)	True 40 bars 25.0%	Frames range highs/lows. Increase lookback to 60 for major swing levels; decrease to 25 for fast intraday scalps.
Execution & Risk	Min Confluence Score SL ATR Multiplier Take-Profit R:R Breakeven Lock	5 (out of 7) 1.8x ATR 2.5 R:R True (+1.0R)	Requires 5/7 confirmation to trade. Automatically locks stop loss to breakeven once +1.0R is achieved.
Dashboard (HUD)	Display HUD Table HUD Position Top Offset Distance (%)	True Top Right (Below Header) 5.5%	Offsets table cleanly 15-20px below crypto token header so price and volume info are never obscured.
